

# Extraction and splash-guard hood 1000 MA

Extraction and splash-guard hood for our low pressure hot water cleaner type 1000 SR prevents condensation and splash water in the cleaning area.

The extraction and splash-guard hood has been developed especially for applications in closed rooms in order to prevent precipitation through condensating water steam.

The water steam is exhausted with a capacity of max. 430 m<sup>3</sup>/hour. If required, the outgoing air hose (max. pull-out length 5 m) can be integrated in the existing building exhaust system.

## Technical data:

Dimensions	Approx. 1000x570x600 mm normal Approx. 519x570x600 mm small	Power supply	230volts/50 cycles
Capacity	Max. 430 m <sup>3</sup> /h at 100 mm ventilator and 90 W capacity	Material	frame of Aluprofile, walls Makrolon

Technical modifications reserved.
