

Rinsing concept

For component cleaning a residue-free surface is partly required i.e. alkaline cleaning agents and especially also water should be rinsed off.

>>> Avoidance of so-called water spots and residues of cleaning agents.

The new rinsing concepts SE-EX and SE-TA can be integrated into the device series 1000 SR and 1000 SRE and offer an even better and a more residue-free cleaning result.

Advantages:

- no additional device is required
- separate cycle with own gun
- suitable for demineralized water
- media supply either from the own tank or from collection tank directly on the pump (with low pre-pressure)

Technical specifications	SE-EX	SE-TA
Working pressure	2,2 bar	2,2 bar
Spray/water volume	2,7 l/min	2,7 l/min
Water supply	Collection tank	Tank or Garden coupling
Monitoring of water supply	By the customer	
Interchangeable inserts	Option	Option

Technical modifications reserved
