

Cleaning of the handles in a climbing hall

Requirements:

- Regular cleaning of the handles or footsteps
- The abrasion of shoes, magnesium and soiling must be removed
- Additional cleaning tasks

Previous solution

So far, the parts were placed in formic acid bath and then blasted by the high-pressure cleaner

Advantages of the low pressure hot water cleaning system

- Gentle procedure for human and environment
- Use in the hall and thus weather independent
- Parts are not fired through the area like at high pressure
- Low water and resource consumption
