

## Amortisation Calculator

### Explanations

This spreadsheet is not write-protected and can be changed without any problems. The user is free to adjust the models according to his wishes and on the basis of his needs resp. his concrete installations.

With this spreadsheet the following uses can be modelled:

- **Machine cleaning:** Cleaning of tooling machines in particular
- **Disinfection:** Disinfection of the coolant liquid
- **Parts Cleaning:** Cleaning of individual parts such as heat exchangers, air filters, elektrostats, brakes in the car/truck industry

Models in this spreadsheet are, of course, a simplified reflection of reality, and focus on the main economic drivers.

Normally it is sufficient to fill out the blue cells.

### DISCLAIMER/NO LIABILITY

This spreadsheet was prepared to the best of our knowledge and understanding. However, ph-cleantec can not make any promises or give any guarantees that these models or any of the input are complete or correct, and must exclude any and all liability which might result from using this model.
